The Western Pacific Region is the epicentre of the noncommunicable disease (NCD) epidemic. The major NCDs—cancers, cardiovascular diseases, chronic respiratory diseases and diabetes—account for more than 80% of all deaths in the Region. NCDs account for 50% of all premature mortality in low and middle income countries in the Region. In the Pacific, NCDs are a crisis. Concerted action is needed to curb the epidemic.

Following the Political Declaration of the High-level Meeting of the General Assembly on the Prevention and Control of Non-communicable Diseases in 2011, the WHO Regional Committee for the Western Pacific endorsed resolution WPR/RC62.R2 on Expanding and intensifying noncommunicable disease prevention and control. In response, a draft Western Pacific Regional Action Plan for the Prevention and Control of Noncommunicable Diseases (2014–2020) (see Annex 1) was developed to support Member States in strengthening their response to NCDs. The objectives and recommended actions of the regional plan are aligned with the Global Action Plan for the Prevention and Control of Noncommunicable Diseases 2013–2020 endorsed by the World Health Assembly in May 2013 (resolution WHA66.10). Draft terms of reference for a global coordination mechanism on NCDs were developed in accordance with WHA66.10 and are provided for review by the Regional Committee (see Annex 2).

The Regional Committee is requested to review and consider for endorsement the draft Western Pacific Regional Action Plan for the Prevention and Control of Noncommunicable Diseases (2014–2020). The Regional Committee is also requested to review the draft terms of reference for a global coordination mechanism for NCDs.
1. CURRENT SITUATION

The Western Pacific Region is the epicentre of the noncommunicable disease (NCD) epidemic. The major NCDs—cardiovascular diseases, diabetes, cancers and chronic respiratory diseases—are pervasive and debilitating. They are responsible for 80% of all deaths in the Region. In the Pacific, the NCD epidemic is particularly catastrophic. Half of all deaths from NCDs in low and middle income countries are premature and occur when adults are most productive, as well as in increasingly younger age groups. Premature deaths pose a heavy and often invisible burden on families and communities. This eventually impacts overall economic development in countries.

The high rates of morbidity and mortality from NCDs in Asia and the Pacific are inextricably linked to the inability of governments to prevent and control NCD risk factors. In most countries, close to half of all males are daily smokers. Rates of smoking among females are also beginning to climb. Pacific island countries and areas report some of the highest prevalence rates for obesity in the world, some as high as 75%. Without exception, all countries and areas in the Region report national prevalence of raised blood pressure in more than 20% of their populations.

Over the past decade, advocacy efforts to mitigate the NCD epidemic have become stronger. The *Political Declaration of the High-level Meeting of the General Assembly on the Prevention and Control of Non-communicable Diseases*¹, adopted in September 2011, galvanized political commitment for bold action. Regional commitments, particularly the *Seoul Declaration on Noncommunicable Disease Prevention and Control in the Western Pacific Region*² and the *Honiara Communiqué on the Pacific Noncommunicable Disease Crisis*³, reflect the collective desire for concerted action in the Western Pacific.

In 2008, the Regional Committee endorsed the *Western Pacific Regional Action Plan for Noncommunicable Diseases (2008–2013)*. Now at the end of this action plan, good progress has been noted in countries, particularly in relation to the health sector response. Many countries have developed national NCD policies and plans. Some countries are creating multisectoral mechanisms to address NCD risk factors. WHO has worked with Member States to strengthen legislation and regulation on tobacco control and salt reduction. Several Pacific island countries successfully launched the WHO Package of Essential NCD (PEN) interventions. Capacity-building for NCD

---

² http://www.wpro.who.int/noncommunicable_diseases/seoul_declaration.pdf
³ http://www.wpro.who.int/noncommunicable_diseases/honiara_communique.pdf
surveillance, including cancer registration, has been a high priority. Settings-based approaches, including Healthy Cities, Healthy Islands and health promoting schools, have served as platforms for NCD risk reduction.

Despite this, overall capacity to address NCDs and risk factors systematically has been weak. Due to the complex disease causation pathways of NCDs and their many risk factors associated with lifestyle, multisectoral efforts may have not been systematic and, as a result, have had minimal impact. The absence of a set of defined priority interventions, targets and indicators has made it difficult to maintain a sharp focus on policies and actions that directly relate to specific health outcomes. Linkages need to be improved between the work in health facilities and community-led efforts. Clear and strategic directions to guide multisectoral action need to be provided periodically. Information and surveillance must drive policy and action.

The sixty-second session of the WHO Regional Committee for the Western Pacific adopted resolution WPR/RC62.R2 calling for the development of a regional action plan that is fully aligned with the global action plan and provides a perspective for action in the context of Asia and the Pacific. The draft Western Pacific Regional Action Plan for the Prevention and Control of Noncommunicable Diseases (2014–2020) (see Annex 1) promotes synergistic action among stakeholders in the Western Pacific. The plan offers a menu of practical actions derived from consultations with Member States, experts and stakeholders of the Region so that interventions can be adapted to specific contexts.

2. ISSUES

Translating the high-level political commitments for NCD prevention and control into actions—policies, programmes, information, action and services—that will make a difference to the people who most need them is perhaps the single largest challenge countries face. The use of an appropriate set of indicators is necessary to move quickly to action.

The draft Western Pacific Regional Action Plan for the Prevention and Control of Noncommunicable Diseases (2014–2020) highlights the importance of a comprehensive monitoring framework, including 25 indicators and the nine voluntary global targets. National NCD prevention and control programmes may use these indicators to measure progress. This approach, however, will require ministries of health to take the lead in broad-based discussions for prioritization, adaption and use of these indicators as part of their national health objectives, national health information systems, civil registries, and other health and demographic reporting systems.
Key principles of the regional action plan include:

(1) **Emphasis on prevention of NCDs and risk factors.**

Prevention of risk factors and promotion of health are widely recognized as the most effective ways to proceed. Despite this, countries continue to face tremendous pressure to use resources on acute and emergency care, as well as hospitalization and treatment of complications and late stages of NCDs. Ministries of health play the lead role in prioritization of actions and budgetary allocations. Ministries of health must disseminate evidence of a set of cost-effective policy interventions for reducing risk factors for noncommunicable diseases. Strong surveillance systems for NCD risk factors need to be maintained to guide strategic action. Sustained and accelerated implementation of the WHO Framework Convention on Tobacco Control, the *Global Strategy to Reduce the Harmful Use of Alcohol*, the *Global Strategy on Diet, Physical Activity and Health*, the *Set of Recommendations on the Marketing of Foods and Non-alcoholic Beverages to Children* and the *Global Strategy for Infant and Young Child Feeding* will impact population health outcomes.

(2) **A systematic approach to NCD prevention and control is critical.**

NCD action plans need to be pursued in the context of national health plans, national health information systems and national health budgets. A vertical approach will not achieve the desired outcomes among populations.

To meet the demand for services, ministries of health must use the existing health infrastructure. Policies and incentives for reform are needed to enable every health facility to form part of a coherent NCD prevention and control delivery system throughout the life course. Care must be exercised to ensure that programmes such as maternal and child health and immunization are sustained. Linkages between communicable diseases and NCDs must be recognized, for example, hepatitis B immunization to prevent liver cancer or treatment of sexually transmitted infections to prevent cervical cancer. The overall capacity of health systems must be expanded to address NCDs.

Universal health coverage initiatives provide a good opportunity to strengthen the NCD response within the entire health system. Packages of services covered through social insurance schemes or workplace programmes may be expanded to include a range of lifestyle modification interventions, such as smoking cessation, nutrition counselling, diabetes screening and hypertension treatment.
(3) Access to services in primary care facilities can be achieved in phases.

In low-resource settings, islands and underdeveloped urban outskirts, the *Package of Essential Noncommunicable (PEN) Disease Interventions for Primary Health Care in Low-Resource Settings* can be easily adopted and linked to the work of community and village health workers to raise awareness and respond to risks at the community level. PEN can also serve as a platform for primary and district health centres to map and localize the underlying causes of poor health outcomes in vulnerable sectors. Interventions are needed simultaneously at different levels of the health system in a variety of governance settings, from small islands to large cities.

(4) National NCD prevention and control programmes need to be strengthened and supported.

To enable the entire health system to respond, NCD programme management teams at ministries of health must assume new roles and responsibilities related to facilitation, advocacy and negotiation. Beyond the health sector response, NCD programme management teams will need to work with legislators, other ministries and sectors, community leaders, the private sector and local governments, among many other stakeholders, to heighten awareness and demand for programmes and services. Additional resources are needed to build capacity of national NCD prevention and control programmes. Capacity-building can be further enhanced by coalitions, alliances, knowledge networks and research consortia. Member States may consider health promotion foundations, boards and councils or national prevention agencies or task forces to take the lead in policy advocacy and enhance community-led efforts. Taxes from tobacco, alcohol and other products are good sources of funds for these new institutional arrangements.

The resolution WHA66.10 requested that the Secretariat develop draft terms of reference for a global coordination mechanism on NCDs through consultations with Member States and regional committees. The draft terms of reference developed are provided for review by the Regional Committee (see Annex 2).

3. ACTIONS PROPOSED

The Regional Committee is requested to review and consider for endorsement the draft *Western Pacific Regional Action Plan for the Prevention and Control of Noncommunicable Diseases (2014–2020)*. The Regional Committee is also requested to review the draft terms of reference for a global coordination mechanism for NCDs.

1. Introduction

The noncommunicable disease (NCD) epidemic is a serious threat to life, health and development in the Western Pacific Region. The major NCDs—cardiovascular diseases, diabetes, cancers and chronic respiratory diseases—account for more than 80% of all deaths in the Region. NCDs account for 50% of all premature mortality (under 70 years of age) in low- and middle-income countries in the Region.

In the Region, the burden of morbidity and mortality from NCDs occurs against a complex backdrop of globalization, rapid economic growth, unplanned urbanization, environmental degradation, climate change and growing inequities within countries. Changing lifestyles and increased purchasing power in some populations have led to a reduction in breastfeeding, fewer meals prepared at home, and increasing consumption of fast food, tobacco and alcohol. The marketing and promotion of unhealthy foods are changing the diets of children. In addition, greater use of motorized transport and the lack of space for walking and biking have reduced physical activity for many people and worsened air quality. All of these factors point towards a dramatic increase in an already high NCD burden.

The main risk factors for NCDs—tobacco use, unhealthy diets, physical inactivity and the harmful use of alcohol—are avoidable. However, the prevalence of these risk factors in the Region is high, and in many countries these risk factors are on the rise. There are an estimated 430 million smokers in the Western Pacific Region, or about one third of the world's smokers.1 Pacific island countries and areas have a very high prevalence of obesity, with adult prevalence as high as 75%. All countries in the Region report a prevalence of over 25% for high blood pressure.

Premature death and disability from NCDs pose heavy and often invisible burdens on families and communities. Among the poor and vulnerable, out-of-pocket expenditures for NCDs can be catastrophic. On top of direct health-care costs, the impact of premature death and disability on national economies is potentially devastating. A recent report from the World Economic Forum and the Harvard School of Public Health indicates that the cost attributable to cardiovascular disease alone in the Western Pacific in 2010 was US$ 107.1 billion, of which the productivity cost component was US$ 50.8 billion.2

Urbanization is occurring rapidly in the Region, bringing with it both threats and opportunities for NCD control. Well-designed food, water and sanitation systems and urban settlements can positively

---

1 Tobacco Free Initiative http://www.wpro.who.int/tobacco/en/index.html
impact health. City governments have the potential to mitigate NCD risk factors and improve access to information, services and programmes. The social and cultural fabric of island communities provide a platform for promoting health. Settings such as schools, workplaces and churches also have the potential to influence lifestyles and environments to address NCDs.

Beyond urban development and land use policies, policy considerations related to globalization and trade liberalization can play a role in addressing NCDs. Trade agreements should not hamper public health efforts to protect people from NCDs. Bilateral agreements on trade vis-à-vis the provisions of the WHO Framework Convention on Tobacco Control is a case in point. Political commitment at the highest level is needed to ensure effective communication, coordination and dialogue among the trade, health and finance sectors. International instruments such as the Codex Alimentarius can be used to address excess and harmful levels of fat, sugar and salt in imported foods.

To address the NCD crisis in the Pacific, the leaders of the 22 Pacific island countries and areas have registered their alarm over the crisis. While some parts of the Western Pacific Region have not felt the full impact of the NCD epidemic, these diseases already are leading to disastrous consequences for people and economies in the Pacific. The majority of NCD-related deaths in the Pacific are among those who are at an age when they should be economically productive. A large proportion of adults in the Pacific suffer the effects of NCD risk factors and NCD-related morbidities that undermine their capacity to be productive and contribute economic development. This creates serious social consequences for families and community life.

Fifty years ago, NCDs were not a major concern for people in the Pacific. Traditional diets were predominantly plant based, with vegetables such as yams and taro, and fish was the main protein source. People lived active more lifestyles. The introduction of cash economies in the Pacific changed the way people acquired and consumed food, tobacco and alcohol. Importation of food items that were cheaper—but were nutrient poor and high in fat, sugar and salt—became popular and convenient. Families abandoned traditional diets and shifted to the consumption of white bread, white rice, canned goods, sugar and processed foods. Canned and highly processed meat products, including luncheon meats, corned beef and hot dogs, became regular fare. Sugar-sweetened beverages began to replace water. The production, availability and consumption of fruits and vegetables declined. In addition, the Pacific has high rates of tobacco use among both adult males and females, as well as high rates of tobacco use for both boys and girls. The harmful use of alcohol and binge drinking are serious public health problems.

Across the Pacific there is considerable variation in the experience of and response to NCDs. Micronesia and Polynesia are experiencing the full force of the obesity epidemic, while the problem is less severe in Melanesia. Awareness of the problem is high in Micronesia and Polynesia, but the response has
been inadequate. In Melanesia, other practices, such as chewing betel nut along with tobacco, have led to very high rates of oral cancer.

Pacific health leaders have articulated the importance of a vigorous response to the NCD crisis. The Healthy Islands vision for health protection and promotion, developed in 1995, is the main banner under which policy advocacy and social, political and community mobilization have been vigorously pursued. Research, programmes and action to address NCDs in the context of Healthy Islands has resulted in an increase in investments in fighting NCDs, such as the 2-1-22 Programme—one organization, the Secretariat of the Pacific Community (SPC) and WHO; one team; and 22 Pacific island countries and areas. The programme has support from Australia and New Zealand.
2. Responding to the challenge of NCDs

Effective governance is needed to address social, political and economic pathways that lead to reduction of NCD risk factors and chronic NCD conditions. But political leaders will need information, data and evidence that show how policies impact health and how cost-effective interventions can deliver a higher and more valuable yield in terms of public health vis-à-vis short-sighted economic gains.

Appendix 1 (Appendix 3 in the Global Action Plan 2013-2020) provides a menu of policy options and cost-effective interventions for the prevention and control of major NCDs. These policy options and interventions can assist Member States in implementing—as appropriate in their national context and without prejudice to their sovereign right to determine taxation and other policies—measures to achieve nine voluntary global targets that have been established. It is recognized that countries vary in their infrastructure and in their capacity to implement all policy options and interventions. A set of very cost-effective interventions is summarized in Table 1.
### Table 1. Very cost-effective interventions for the prevention and control of NCDs

<table>
<thead>
<tr>
<th>Risk factor/disease</th>
<th>Policy options/interventions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tobacco use</td>
<td>• Reduce affordability of tobacco products by increasing tobacco excise taxes.</td>
</tr>
<tr>
<td></td>
<td>• Create by law completely smoke-free environments in all indoor workplaces, public places and public transport.</td>
</tr>
<tr>
<td></td>
<td>• Warn people of the dangers of tobacco and tobacco smoke through effective health warnings and mass media campaigns.</td>
</tr>
<tr>
<td></td>
<td>• Ban all forms of tobacco advertising, promotion and sponsorship.</td>
</tr>
<tr>
<td>Harmful use of alcohol</td>
<td>• Regulate commercial and public availability of alcohol.</td>
</tr>
<tr>
<td></td>

<tr>
<td>Cancer</td>
<td>• Prevention of liver cancer through hepatitis B immunization.</td>
</tr>
<tr>
<td></td>
<td>• Prevention of cervical cancer through screening, visual inspection with acetic acid (VIA) or Pap smear (cervical cytology) if cost-effective, linked with timely treatment of pre-cancerous lesions.</td>
</tr>
</tbody>
</table>

Accelerated implementation of the WHO Framework Convention on Tobacco Control, the WHO Global Strategy to Reduce Harmful Use of Alcohol, the WHO Global Strategy on Diet, Physical Activity and Health, WHO Set of Recommendations on the Marketing of Food and Non-alcoholic Beverages to Children and the WHO Global Strategy for Infant and Young Child Feeding can significantly contribute to the prevention and control of NCDs.

As outlined in the Political Declaration of the High-level Meeting of the General Assembly on the Prevention and Control of Non-communicable Diseases, Member States can promote NCD prevention and control within sexual and reproductive health and maternal and child health programmes, especially at the primary health-care level, as well as other programmes, as appropriate, and also integrate interventions in these areas into NCD prevention programmes. Recognition should also be given to health disparities

---

4 United Nations General Assembly resolution 66/2 (http://www.who.int/nmh/events/un_ncd_summit2011/political_declaration.pdf)
that exist between indigenous and non-indigenous populations and in the incidence of NCDs and their common risk factors. Member States can also pursue and promote gender-based approaches for the prevention and control of NCDs founded on data disaggregated by sex and age in an effort to address the critical differences in the risks of morbidity and mortality from NCDs for women and men.

The use of mass media and social media, as well as traditional culture and art, can complement face-to-face interaction of health workers with people and can be optimized to educate the public and empower communities to take control over determinants of health.

The WHO Package of Essential Noncommunicable (PEN) Disease Interventions for Primary Health Care in Low-Resource Settings offers a set of interventions that can be adapted and scaled up in primary health care as part of the overall initiative to promote health throughout the life-course.\(^5\) Generic medicines and low-cost technologies are essential to address the needs of those who already have chronic conditions or early signs of illness. National protocols for managing NCDs are also needed to optimize care. Universal health coverage poses a golden opportunity to articulate a range of services that can be covered through insurance. Beyond this, universal health coverage can be a lever for a social movement for the prevention of risk factors and disease throughout the life-course.

A set of nine voluntary global targets to be achieved by 2025 will boost NCD prevention and control programmes in all countries and make governments more accountable. These targets underscore the critical importance of NCD surveillance systems that can track, monitor and interpret trends in risk factors, morbidity and mortality, as well as responsiveness to policies and public health interventions.

Investments in financial and human resources to combat NCDs will pay dividends in the long term. Conversely, if countries fail to invest and take little or no action, they can expect to face huge costs as premature deaths undermine the economic gains of recent years and late-stage cancer, cardiovascular diseases and amputations drain social health insurance systems. If breadwinners die prematurely from NCDs, families and communities will suffer.

The need for action to combat NCDs has been well articulated. Cost-effective interventions are available. A call for political action at the global level has triggered unprecedented awareness of the urgency of the NCD epidemic. Strategic and specific action that will result in effective policies, programmes and supportive environments is now of critical importance.

---

3. Development of the draft regional action plan

The Regional Committee for the Western Pacific, in resolution WPR/RC62.R2, requested the Regional Director to develop a regional action plan to address NCDs, in consultation with Member States and in collaboration with partners and stakeholders. The draft Western Pacific Regional Action Plan for the Prevention and Control of Noncommunicable Diseases (2014–2020) fulfils that mandate and is intended to guide the Region’s governments in strengthening their response to the NCD epidemic. The regional action plan draws upon global commitments contained in the Political Declaration of the High-level Meeting of the General Assembly on the Prevention and Control of Non-communicable Diseases. The political declaration urges countries to integrate NCD prevention and control into their national health planning process and their development agenda by promoting, establishing or strengthening multisectoral national policies and plans for the prevention and control of NCDs.

The regional action plan also is aligned with the Global Action Plan for the Prevention and Control of Noncommunicable Diseases (2013–2020), which was endorsed by the World Health Assembly in May 2013 in resolution WHA66.10, thus ensuring consistency between global and regional efforts.

The regional action plan utilizes these global commitments as a platform to enable countries in the Western Pacific Region to develop a strategic and evidence-based NCD response. The regional action plan takes into account the global response but also recognizes the unique features and context of the NCD epidemic in Asia and the Pacific.

The draft Western Pacific Regional Action Plan for the Prevention and Control of Noncommunicable Diseases (2014–2020) is envisioned as enabling guidance and is not intended to constrain Member States. In some countries, the NCD burden requires an even greater response than that of the regional action plan, which has the flexibility to accommodate a wide range of needs, capacities and governance frameworks.

Like other WHO regions, the Western Pacific Region has contributed to the growing body of knowledge of what works and what does not work—knowledge that is now embodied in the Global Action Plan for the Prevention and Control of Noncommunicable Diseases (2013–2020). As the Western Pacific Region is one of the epicentres of the NCD epidemic, it is hoped that a spirit of innovation and community action will facilitate the sharing of experiences, dialogue and the fine-tuning of approaches in turning the tide against the NCD epidemic.

The regional action plan recognizes that many of the most effective actions necessary to tackle the NCD burden lie outside the health sector. Policies in sectors responsible for education, trade, food, alcohol and urban development need to be as much part of action on NCDs as the responses from the health sector.
Annex 1

A health-in-all-policies approach will increasingly play an important role in rendering visibility to the need for dialogue and consensus on the impact of policies on health in general and the NCD epidemic in particular.

This document is the second NCD regional action plan for the Western Pacific. The previous plan, the Western Pacific Regional Action Plan for Noncommunicable Diseases (2008–2013), has been reviewed and substantial progress has been noted (see Appendix 2). Highlights since 2008 include progress in tobacco control and NCD surveillance, as well as the development of national NCD policies and plans. Constraints include limited capacity for multisectoral action and inadequate financial and human resources. Many countries have articulated challenges in prioritizing evidence-based interventions and setting targets amid competing priorities.

The diverse realities faced by governments in the Region are reflected in the Western Pacific Regional Action Plan for the Prevention and Control of Noncommunicable Diseases (2014–2020). This diversity inevitably leads to very distinct manifestations of the NCD epidemic in different parts of the Region, and the need for a regional action plan that is adaptable to various contexts.

The bedrock of the Pacific approach to NCDs is the Healthy Islands vision that serves as a unifying theme for health protection and promotion and is strongly intersectoral. Public awareness about NCDs needs to be transformed into feasible action at the level of households, families and communities. Culturally appropriate measures need to be documented, shared and scaled up.

Pacific health ministers have repeatedly sought solutions to the negative impact of imported high-energy foods. Several policy imperatives, such as taxation, have been tried with varying degrees of success. Bans on specific food products, as well as comprehensive approaches to food security, have been tried. Evaluation and documentation of reasons for success and failure need to be undertaken in more systematic ways.

In Asia, with rapid economic growth and development, governments will need to find solutions to risk factors that are related to the new purchasing power of women and youth, as well as new patterns of consumption of food and harmful products, such as tobacco and alcohol. The tendency to invest in the treatment of NCDs, instead of prevention and the reduction of risk factors, will be a major challenge.

The NCD epidemic in Asian countries in the Western Pacific Region involves different elements than that of the Pacific. The long-term consequences, however, are no less profound. Although obesity and its consequences have not yet reached the extreme levels found in the Pacific island countries and areas, current trends are showing a rapid increase in obesity across Asia.
The Seoul Declaration⁶ and the Honiara Communiqué⁷ in 2011 emphasized the importance of a supportive multisectoral approach. Innovation is widespread throughout the Region. Malaysia has pioneered effective cross-sectoral governance arrangements and has established a health promotion board that funds various community initiatives on health promotion. China is taking innovative approaches with its cities. Now in its second term, Healthy Japan 21 is a national campaign started in 2000 to promote health and well-being and build healthy environments by promoting national goals, such as the extending healthy life expectancy and decreasing health disparities. Japan also has had decades of experience in effective salt-reduction strategies. The Republic of Korea has successfully banned marketing of specific types of food to children and is a leader in cancer surveillance, screening and referral systems. The Philippines has established an NCD coalition that is now the core force for establishment of a proposed national mechanism for NCD prevention. Australia started the first health promotion foundation, a concept that has since spread to Malaysia, Mongolia and Tonga, with the Lao People's Democratic Republic, Samoa, Solomon Islands, Vanuatu and Viet Nam all working toward autonomous infrastructure and financing for the promotion of health and prevention of disease. Australia, Hong Kong (China), New Zealand and Singapore continue to stand as global leaders in reducing tobacco use. Australia's national preventive health task force and agenda is a new model that can inform other countries.

4. Comprehensive global monitoring framework for the prevention and control of NCDs

The comprehensive global monitoring framework, including 25 indicators and a set of nine voluntary global targets for the prevention and control of NCDs, was adopted by the World Health Assembly (WHA66.10) in May 2013 and is presented in Table 2. Countries can develop their national targets in alignment with the global targets. Reports on progress achieved in attaining the nine voluntary global targets will be made in 2016, 2021 and 2026.

</tr>
</tbody>
</table>

\(^8\) Countries will select indicator(s) of harmful use as appropriate to national context and in line with WHO’s global strategy to reduce the harmful use of alcohol and that may include prevalence of heavy episodic drinking, total alcohol per capita consumption, and alcohol-related morbidity and mortality, among others.

\(^7\) In WHO’s global strategy to reduce the harmful use of alcohol the concept of the harmful use of alcohol encompasses the drinking that causes detrimental health and social consequences for the drinker, the people around the drinker and society at large, as well as the patterns of drinking that are associated with increased risk of adverse health outcomes.

\(^10\) WHO’s recommendation is less than 5 grams of salt or 2 grams of sodium per person per day.

<sup>11</sup> Countries will select indicator(s) appropriate to national context.  
<sup>12</sup> Individual fatty acids within the broad classification of saturated fatty acids have unique biological properties and health effects that can have relevance in developing dietary recommendations.

5.1 Overview

Vision: Governments and societies sustain their political and financial commitments to prevent and control noncommunicable diseases (NCDs) so that these diseases are no longer a barrier to socioeconomic development.

Mission: To scale up effective interventions to prevent and control NCDs through health-promoting environments.

Goal: To reduce the burden of preventable morbidity and disability and avoidable mortality due to NCDs in the Western Pacific Region.

5.2 Overarching principles and approaches

Leadership and coordination

Prevention and control of NCDs need a “whole-of-government” and a “whole-of-society” approach. The health sector has to take the lead in evidence-based advocacy and monitoring. Beyond inclusion in national health plans, NCD prevention and control should be included in national development plans.

Human rights

NCD prevention and control strategies must be formulated and implemented in accordance with international human rights conventions and agreements.

Empowerment of people

Individuals, families, communities and societies should be empowered and involved in activities for the prevention and care of NCDs.

Evidence-based practice

Strategies for the prevention and control of NCDs need to be based on scientific evidence and public health principles.

Life-course approach

A life-course approach is key to the prevention and control of NCDs. The process starts with maternal health, including preconception, antenatal and postnatal care and maternal nutrition. In addition,
Annex 1

proper infant feeding practices, including promotion of breastfeeding and health promotion of children, adolescents and youth, followed by promotion of a healthy working life, healthy ageing and care of NCDs for people in later life, are integral components of a life-course approach.

Multisectoral action

Effective NCD interventions require a number of combined elements including, as appropriate, meaningful community participation and engagement, supportive policy prioritization and settings, multisectoral collaboration, a health-in-all-policies approach and active partnerships among national authorities, nongovernmental organizations, academia and private sector.

Universal health coverage and equity

Good health is essential to sustained economic and social development and poverty reduction. Access to needed health services is crucial for maintaining and improving health. At the same time, people need protection from being pushed into poverty because of the cost of health care.

Universal health coverage is defined as ensuring that all people have access to needed promotive, preventive, curative and rehabilitative health services of sufficient quality to be effective, while also ensuring that people do not suffer financial hardship when paying for these services. Universal health coverage has therefore become a major goal for health reform in many countries and a priority objective of WHO.

All people should have full access to health care and opportunities for the prevention and control of NCDs based on need regardless of age, sex, social status, presence of disabilities and the ability to pay.

5.3 Objectives and Actions for Member States and WHO

The objectives of the Western Pacific Regional Action Plan for the Prevention and Control of Noncommunicable Diseases (2014–2020) are aligned with Global Action Plan for the Prevention and Control of Noncommunicable Diseases (2013–2020) for consistency and to help Member States adapt them to their national context. Recommended actions for Member States and WHO are provided by objectives.
In summary, the objectives are as follows:

1. To raise the priority accorded to the prevention and control of noncommunicable diseases in global, regional and national agendas and internationally agreed development goals, through strengthened international cooperation and advocacy

2. To strengthen national capacity, leadership, governance, multisectoral action and partnerships to accelerate country response for the prevention and control of noncommunicable diseases

3. To reduce modifiable risk factors for noncommunicable diseases and underlying social determinants through creation of health-promoting environments

4. To strengthen and orient health systems to address the prevention and control of noncommunicable diseases and the underlying social determinants through people-centred primary health care and universal health coverage

5. To promote and support national capacity for high-quality research and development for the prevention and control of noncommunicable diseases

6. To monitor the trends and determinants of noncommunicable diseases and evaluate progress in their prevention and control

**Objective 1. To raise the priority accorded to the prevention and control of noncommunicable diseases in global, regional and national agendas and internationally agreed development goals, through strengthened international cooperation and advocacy**

**Recommended actions for Member States**

1. Strengthen advocacy for the implementation of the commitments of the *Political Declaration of the High-level Meeting of the General Assembly on Non-communicable Disease Prevention and Control* and secure sustained political commitment for action against NCDs.

2. Integrate NCDs into national strategic and development plans with special attention to social determinants of health and the health needs of vulnerable populations.

3. Promote universal health coverage as a means of prevention and control of NCDs.

5. Advocate for adoption of the voluntary global NCD targets as national targets, as appropriate to the national context.
Annex 1

Recommended actions for WHO

1. Provide technical assistance to raise public awareness about the links between NCDs and sustainable development including integration of the prevention and control of NCDs into national health and development planning processes and the United Nations Development Assistance Framework.

2. Facilitate coordination, collaboration and cooperation among the main stakeholders including Member States; United Nations funds, programmes and agencies; civil society; and the private sector, as appropriate.

3. Strategically advocate for action on NCDs and adoption of global targets at the highest levels of political leadership in countries and among United Nations funds, programmes and agencies; development partners; donors; and regional bodies, such as the Association of Southeast Asian Nations (ASEAN), the Asian Development Bank (ADB), Asia-Pacific Economic Cooperation (APEC), the Organisation for Economic Co-operation and Development (OECD) and the Secretariat of the Pacific Community (SPC).

Objective 2. To strengthen national capacity, leadership, governance, multisectoral action and partnerships to accelerate country response for the prevention and control of noncommunicable diseases

Recommended actions for Member States

1. Develop or strengthen national multisectoral policies and plans for NCD prevention and control.

2. As appropriate to the national context, set up a national multisectoral mechanism, such as a high-level commission, agency or task force, for shared leadership, policy coherence and mutual accountability of different sectors of policy-making that have a bearing on NCDs.

3. Secure adequate, reliable and sustained resources for action against NCDs.

Recommended actions for WHO

1. Provide technical support for developing and strengthening national multisectoral policies, plans and mechanisms for implementing programmes for the prevention and control of NCDs.

2. Create opportunities for sharing of information, exchange of knowledge, best practices, tools and templates.

3. Provide technical support and guidance materials for advocacy, resource mobilization and implementation of very cost-effective interventions for prevention and control of NCDs.
Objective 3. To reduce modifiable risk factors for noncommunicable diseases and underlying social determinants through the creation of health-promoting environments

Recommended actions for Member States

1. Tobacco control: Accelerate implementation of the WHO Framework Convention on Tobacco Control (FCTC), prioritizing efforts to:
   a. reduce the affordability of tobacco products by increasing tobacco excise taxes;
   b. create by law completely smoke-free environments in all indoor workplaces, public places and public transport;
   c. warn people of the dangers of tobacco and tobacco smoke through effective health warnings and mass media campaigns; and
   d. ban all forms of tobacco advertising, promotion and sponsorship.

2. Reduce harm from alcohol: Advance the implementation of the WHO Global Strategy to Reduce the Harmful use of Alcohol, prioritizing efforts to:
   a. regulate commercial and public availability of alcohol
   b. restrict or ban alcohol advertising and promotions
   c. use pricing policies such as excise taxes on alcoholic beverages
   d. strengthen drink driving policies and countermeasures.

3. Promote a healthy diet
   a. Implement the WHO Global Strategy on Diet, Physical Activity and Health.
   b. Strengthen national food and nutrition policies and action plans and implementation of related global strategies
      (1) Promote and support exclusive breastfeeding for the first six months of life, continued breastfeeding until two years old and beyond and adequate and timely complimentary feeding.
      (2) Implement WHO's set of recommendations on the marketing of foods and non-alcoholic beverages to children, including mechanisms for monitoring.
   c. Develop guidelines, recommendations or policy measures that engage relevant sectors, such as food producers and processors and other commercial operators, to:
      1. reduce the level of salt/sodium in prepared or processed food;
      2. increase availability, affordability and consumption of fruit and vegetables;
      3. replace trans fats with unsaturated fats;
      4. reduce saturated fatty acids in food and replace with unsaturated fatty acids;
      5. reduce free and added sugars in food and non-alcoholic beverages;
      6. reduce portion size and energy density of foods in order to limit calories;
      7. reduce the impact of marketing of foods and non-alcoholic beverages to children;
   d. Promote the provision and availability of healthy food in all public institutions including schools, other educational institutions and workplaces.
   e. Promote nutrition labelling for all pre-packaged foods.
Annex 1

4. Promoting physical activity
   a. Adopt and implement national guidelines on physical activity for health.
   b. Develop policy measures to promote physical activity through activities of daily living, including through "active transport", recreation, leisure and sport.
   c. Conduct public campaigns through mass media, social media and at the community level and social marketing initiatives to inform and motivate adults and young people about the benefits of physical activity and to facilitate healthy behaviours.

5. Create enabling environments through settings-based approaches
   a. Adopt settings-based approaches, such as cities, islands/villages, workplaces, schools, clinics and hospitals, to offer healthier dietary choices and to create enabling environments for physical activity, as well as make possible smoke-free environments.

Recommended actions for WHO

1. Provide technical assistance to reduce modifiable risk factors through implementing the WHO Framework Convention on Tobacco Control (FCTC) and its guidelines, the WHO global strategies for addressing modifiable risk factors and other health promoting policy options, including healthy workplace initiatives, health-promoting schools and health-sensitive urban development.

2. Develop tools for advocacy and support policy and programme implementation, including skills and capacity-building.

3. Advocate for engagement with local governments and settings to implement NCD prevention and control interventions.

4. Identify models and guidance for best practices in collaboration with other sectors and support their wider implementation.

5. Develop guidance for engagement with the labour sector on health promotion in the workplace and workers health.

Objective 4. To strengthen and orient health systems to address the prevention and control of noncommunicable diseases and the underlying social determinants through people-centred primary health care and universal health coverage

Recommended actions for Member States

1. Highlight the importance of NCD prevention and control in universal health coverage.

2. Strengthen the role of primary and secondary health-care and referral systems in overall efforts to prevent, control and manage NCDs.

3. Enhance access to essential NCD interventions through a defined service package, such as adapting the WHO Package of Essential Noncommunicable Disease Interventions (PEN) in the primary health-care system, and through appropriate referrals, as part of universal health coverage:
   a. scale up early detection and coverage and prioritize very cost-effective, high-impact interventions to address behavioural risk factors;
b. provide counselling and patient education, including the provision of brief advice for tobacco cessation and reducing harmful use of alcohol;

c. assess, manage and treat risk factors and link with family and community-based approaches for lifestyle modification;

d. refer people at high risk of disease and complications;

e. prevent liver cancer through hepatitis B immunization as part of the Expanded Programme on Immunization;

f. prevent cervical cancer through cost-effective screening methods, such as visual inspection with acetic acid (VIA) and/or pap smear (cervical cytology), linked with timely treatment of precancerous lesions;

g. provide multidrug therapy, including glycaemic control for diabetes mellitus for individuals who have had a heart attack or stroke, and to people at high risk (> 30%) of a cardiovascular event within 10 years; and

h. aspirin therapy for acute myocardial infarction.

4. Shift from reliance on user fees levied on ill people to the protection provided by pooling and prepayment, with inclusion of NCD services.

5. Strengthen health workforce and institutional capabilities for the implementation of NCD prevention and control through patient-centred service models, multidisciplinary teams, quality assurance measures and continuing education.

6. Expand access to community-based rehabilitation.

7. Provide health-financing arrangements to cover NCD prevention, screening, management and control.

8. Improve access to palliative care and pain relief for patients with cancer and other life-threatening conditions as part of the continuum of care.

**Recommended actions for WHO**

1. Advocate for linkage of NCD prevention and control to universal health coverage.

2. Provide support, guidance and technical background to countries in integrating cost-effective interventions for NCDs and their risk factors into health systems, including essential primary healthcare packages.

3. Encourage countries to improve access to essential medicines and medical technologies, as part of universal health coverage through development of models, tools, and training.

4. Support the development of health-financing schemes that cover NCD prevention, screening, management and control.

5. Provide guidance for health human resource planning and development to respond to the NCD epidemic.
6. Develop training packages for implementation of PEN and support actions towards strengthening capacity at different levels for health financing, essential medicines and technologies, and human resources for health.

7. Assist countries to establish clinical practice guidelines and develop the capacity to systematically assess new and emerging evidence.

**Objective 5. To promote and support national capacity for high-quality research and development for the prevention and control of noncommunicable diseases**

*Recommended actions for Member States*

1. Develop, implement and monitor a national NCD research agenda.

2. Undertake operational research to support, evaluate and assess relevant approaches for NCD prevention and control, particularly:
   a. coverage and access by vulnerable populations to NCD prevention and control services
   b. costing and cost-effectiveness of NCD prevention and control
   c. social and economic impact of NCD control policies.

*Recommended actions for WHO*

1. Provide technical assistance and opportunities for collaboration that will strengthen national capacity for NCD-related research.

2. Promote sharing of intercountry research expertise and experience

**Objective 6. To monitor the trends and determinants of noncommunicable diseases and evaluate progress in their prevention and control**

*Recommended actions for Member States*

1. Adapt the set of voluntary global targets and indicators for 2025 for the prevention and control of NCDs, as appropriate to the national context, with reporting at regular intervals.

2. Develop or strengthen a national mechanism to coordinate surveillance and use data for action at local and national levels for NCD prevention and control.

3. Develop or strengthen mortality registration with up-to-date International Classification of Disease guidelines to generate reliable NCD mortality data.

4. Conduct periodic surveys to measure population levels of risk factors in adults and children at least once in five years, reporting all data by gender where possible.

5. Establish or strengthen cancer registries.

6. Periodically assess health system capacity and national response to NCDs.

7. Monitor policies and other instruments for NCD prevention and control and their implementation.
**Recommended actions for WHO**

1. Provide technical support for developing/strengthening national NCD surveillance framework.

2. Provide guidance on definitions, as appropriate, and on how indicators should be measured, collected, aggregated and reported, as well as the health information system requirements at the national level.

3. Provide technical support to:
   a. strengthen vital registration
   b. measure population levels of risk factors using WHO tools
   c. strengthen cancer registration.

4. Provide guidance and support for measuring population levels of salt consumption through appropriate tools and approaches.

5. Assist countries to conduct national capacity assessments for NCD prevention and control, through the provision of appropriate tools and training.

6. Assess regional progress in NCD prevention and control periodically.

**5.4 Proposed actions for international partners**

1. International cooperation and capacity strengthening:
   a. Encourage the mainstreaming of the prevention and control of NCDs in development cooperation initiatives, internationally agreed development goals, economic development policies, sustainable development frameworks and poverty-reduction strategies.

   b. Support national authorities to create enabling environments for implementing evidence-based multisectoral action, in other words by reducing modifiable risk factors of NCDs through health-promoting policies in agriculture, education, labour, sports, food, trade, transport and urban planning, by implementing existing international conventions in the areas of environment and labour, and by strengthening health financing for universal health coverage.

   c. Strengthen international cooperation within the framework of North–South, South-South and triangular cooperation, in support of national, regional and global plans for the prevention and control of NCDs, and among other things through the exchange of best practices and research findings in the areas of health promotion, legislation, regulation, monitoring and evaluation and health systems strengthening, strengthening of institutional capacity, training of health personnel, development of appropriate health-care infrastructure and diagnostics, and by promoting the development and dissemination of appropriate, affordable and sustainable transfer of technology on mutually agreed terms and the production of affordable, safe, effective and quality medicines and vaccines, medical technologies and information and electronic communication technologies (eHealth) and the use of mobile and wireless devices (mHealth).
Annex 1

d. Facilitate and support research, development and innovation, institutional capacity and training of researchers to strengthen national research capacity, including through the creation of research fellowships and scholarships for international study in disciplines and interdisciplinary fields pertinent to the prevention and control of NCDs.

e. Support WHO in establishing the global coordination mechanism where stakeholders—including nongovernmental organizations, professional associations, academia, research institutions and the private sector—can contribute and take concerted action against NCDs.

f. Support the United Nations funds, programmes agencies to collaborate through an agreed division of labour. A provisional list with examples of a collaborative division of tasks and responsibilities for United Nations funds, programmes and agencies is under development and will be appended to this action plan once finalized.

2. Resource mobilization for the prevention and control of NCDs:

a. Facilitate the mobilization of adequate, predictable and sustained financial resources and the necessary human and technical resources.

b. Support and be part of the social movement to support collaborative implementation of the global and regional action plans and to promote health and equity in relation to the prevention and control of NCD.

5.5 Monitoring and reporting progress

Monitoring and reporting of the Western Pacific Regional Action Plan for the Prevention and Control of Noncommunicable Diseases (2014–2020) will be fully aligned with the proposed monitoring of the Global Action Plan for the Prevention and Control of Noncommunicable Diseases (2013–2020) to harmonize the efforts. WHO is in the process of developing appropriate action plan indicators to monitor progress of implementation of the Global Action Plan for the Prevention and Control of Noncommunicable Diseases (2013–2020). These indicators, based on feasibility, current availability of data and capability of application across the six objectives of the global action plan, will be used to assess the progress made in 2016, 2018 and 2021.

Reports on progress achieved in attaining the nine global voluntary targets will be submitted in 2016, 2021 and 2026.

WHO will also update Appendix 3 (menu of policy options) of the global action plan, which appears as Appendix 1 of the regional action plan, as appropriate, to be considered through the Executive Board, by the World Health Assembly, in the light of new scientific evidence.
6. Synergies between NCDs and other programmes

There are many other conditions of public health importance that are associated with the four main NCDs—cardiovascular diseases, cancers, diabetes and chronic respiratory diseases. The other conditions include:

1. other NCDs—renal, endocrinal, neurological, haematological, hepatic, gastroenterological, musculoskeletal, skin and oral diseases;
2. mental disorders;
3. disabilities, including blindness and deafness; and
4. violence and injuries.

Some of these conditions are the subject of other WHO strategies and World Health Assembly resolutions. NCDs and their risk factors are also linked to communicable diseases, maternal and child health, reproductive health, ageing, and social, environmental and occupational determinants of health. The Western Pacific Regional Action Plan for the Prevention and Control of Noncommunicable Diseases (2014–2020) will explore potential synergies between NCDs and interrelated conditions to maximize opportunities and efficiencies for mutual benefit.

Healthy Cities and settings

Healthy Cities is a priority initiative of the Western Pacific Region. As one of the WHO regions with very rapid urbanization, cities in the Region offer a platform for NCD prevention and control. City governments are well placed to provide multisectoral interventions. “Eat smart” restaurants and schools, environmentally sustainable and healthy urban transport, walking and cycling paths, healthier street foods and smoke-free cities are examples of innovative approaches for NCD prevention and control in cities of the Region. Healthy cities and settings, such as schools and workplaces, will have an emphasis on the implementation of the regional action plan.

Subnational focus is a related area and there will be new pathways to work at the provincial and district level.

Healthy Islands

Healthy Islands is an ideal envisioned in 1995 at the first meeting of the Ministers of Health for the Pacific Island Countries on Yanuca Island, Fiji. That vision has served as a unifying theme for health protection and health promotion in the Pacific and reflects the comprehensive and integrated approach to
Annex 1

Healthy Islands is the predominant and growing burden of NCDs, which have become a crisis in the Pacific island countries and areas. Efforts for prevention and control will be enhanced accordingly to the local context.

**Healthy ageing**

The Region is experiencing a rapid and profound demographic transition, whose successful management poses a significant challenge. With respect to NCDs and healthy ageing, prevention of NCDs will increase the number and proportion of people who experience healthy ageing, and avoid high healthcare costs and even higher indirect costs in older age groups. Otherwise, health costs will outstrip pensions and cause financial catastrophe for a large segment of the population, especially older women, who face greater financial insecurity. The ageing and health agenda in the Region encompasses a range of actions, including promoting healthy ageing across the life-course, developing age-friendly health systems to address the health needs of older people, strengthening the evidence base, and promoting right of older people to good health.

**Women's and children’s health**

The *Political Declaration of the High-level Meeting of the General Assembly on the Prevention and Control of Non-communicable Diseases* and the Regional Committee for the Western Pacific in resolution WPR/RC62.R2 state that women and children's health is inextricably linked with NCDs and that the promotion of health through the life-course is important for both maternal and child health and NCDs. As mortality from infectious diseases and related to childbirth decrease, NCDs represent an increasing cause of death and disability among women and children. Cervical cancer, the second most common type of cancer among women, is rising, and 80% of cases occur in developing countries. Most deaths occur in the prime of life. NCDs can have an intergenerational effect as NCDs prior to and during pregnancy can result in sub-optimal newborn health, including prematurity and low birth weight. In the long run, these are associated with increased NCDs. In particular, strengthening the implementation of the International Code of Marketing of Breast-milk Substitutes and the *Global Strategy for Infant and Young Child Feeding* are important to promote, protect and support breastfeeding, including exclusive breastfeeding for six months, continued breastfeeding until two years and above, and complementary feeding from six months onwards. Breastfeeding not only reduces susceptibility to infections and the risk of undernutrition, but also reduces the risk of obesity and NCDs across the life-course.
**Men's health**

Globally, men are more affected than women by the impact of NCDs. Men consume more salt, alcohol and tobacco and have higher rates of morbidity and mortality for many of the most common NCDs. Men’s health also has an impact on their families both economically and personally. In some age groups, men may be less likely than women to engage with the health system. Programmes and policies aimed at preventing and managing NCDs need to be relevant and engaging for both women and men. Targeted approaches should be developed and implemented if mainstream interventions are less effective with one gender.

**Workers' health**

Workers represent half of the world’s population and are the major contributors to economic and social development. Their health is determined not only by workplace hazards but also by social and individual factors and access to health services. The Sixtieth World Health Assembly in 2007 (resolution WHA60.26) endorsed *Global Plan of Action on Workers’ Health (2008–2017)*. The set of actions proposed in the global plan can be used to prevent and control NCDs in workers. Workplaces offer a good setting for multiple interventions including tobacco control, reducing harm from alcohol, promotion of healthy diets and physical activity, screening and early detection and appropriate referrals. Workers’ health is also an entry point for family health.

Occupational health deals with all aspects of health and safety in the workplace and has a strong focus on primary prevention of hazards. The health of the workers has several determinants, including risk factors at the workplace leading to cancers, accidents, musculoskeletal diseases, respiratory diseases, hearing loss, circulatory diseases, stress-related disorders, communicable diseases and other issues. Selected occupational lung carcinogens, such as beryllium and silica, were estimated to cause 111,000 lung cancer deaths in 2004, while asbestos caused 59,000 deaths (from mesothelioma).

**Co-morbidities**

Major NCDs, being predominantly diseases of middle-aged and elderly people, often coexist with co-morbidities. Thus, co-morbidities play an integral role in the development, progression and response to treatment of major NCDs. Examples of co-morbidities include mental disorders, cognitive impairment and other NCDs, including renal, endocrine, neurological, haematological, hepatic, gastroenterological, musculoskeletal, skin and oral diseases, disabilities and genetic disorders. The co-morbidity burden is associated with higher rates of hospitalization and worsened health outcomes and need to be addressed through approaches that are integrated within NCD programmes.
Annex 1

Mental disorders

Since mental disorders are an important cause of morbidity and contribute to the global NCD burden, equitable access to effective programmes and health-care interventions is needed. Mental disorders affect, and are affected by, other NCDs. Mental disorders can be a precursor or consequence of NCDs, or the result of interactive effects. For example, there is evidence that depression predisposes people to developing heart attacks and, conversely, heart attacks increase the likelihood of depression. Risk factors of NCDs, such as sedentary behaviour and the harmful use of alcohol, also link NCDs with mental disorders. Characteristics of economically underprivileged population segments, such as little schooling, lower social class and unemployment, are shared by mental disorders as well as NCDs. Despite these strong connections, evidence indicates that mental health disorders in patients with NCDs and NCDs in patients with mental disorders are often overlooked.

Disabilities and rehabilitation

Approximately 15% of the population experiences disability, and the increase in NCDs is having a profound effect on disability trends. For example, NCDs are estimated to account for about two thirds of all years lived with disability in low- and middle-income countries. NCD-related disability, such as amputation, blindness or paralysis, puts significant demands on social welfare and health systems, impacts productivity and impoverishes families. Rehabilitation needs to be a key health strategy in NCD programmes to address risk factors, for example obesity and physical inactivity, as well as loss of function due to NCDs, such as paralysis due to stroke or amputation due to diabetes. Access to rehabilitation services can decrease the effects and consequences of disease, hasten discharge from hospital and improve health and the quality of life.
APPENDIX 1: Menu of policy options and cost-effective interventions for prevention and control of NCDs (from WHA66.10)

Appendix 3

Menu of policy options and cost-effective interventions for prevention and control of major noncommunicable diseases, to assist Member States in implementing, as appropriate, for national context, (without prejudice to the sovereign rights of nations to determine taxation among other policies), actions to achieve the nine voluntary global targets (Note: This appendix needs to be updated as evidence and cost-effectiveness of interventions evolve with time).

The list is not exhaustive but is intended to provide information and guidance on effectiveness and cost-effectiveness of interventions based on current evidence\textsuperscript{1,2,3} and to act as the basis for future work to develop and expand the evidence base on policy measures and individual interventions. According to WHO estimates, policy interventions in objective 3 and individual interventions to be implemented in primary care settings in objective 4, listed in bold, are very cost-effective\textsuperscript{4} and affordable for all countries\textsuperscript{1,2,3} However, they have not been assessed for specific contexts of individual countries. When selecting interventions for prevention and control of noncommunicable diseases, consideration should be given to effectiveness, cost-effectiveness, affordability, implementation capacity, feasibility, according to national circumstances, and impact on health equity of interventions, and to the need to implement a combination of population-wide policy interventions and individual interventions.

</tr>
</tbody>
</table>

1 In addressing each risk factor, Member States should not rely on one single intervention, but should have a comprehensive approach to achieve desired results.

2 Tobacco use: Each of these measures reflects one or more provisions of the WHO Framework Convention on Tobacco Control (WHO FCTC). The measures included in this Appendix are not intended to suggest a prioritization of obligations under the WHO FCTC. Rather, these measures have been proven to be feasible, affordable and cost-effective and are intended to fulfill the criteria established in the chapeau paragraph of Appendix 3 for assisting countries to meet the agreed targets as quickly as possible. The WHO FCTC includes a number of other important provisions, including supply-reduction measures and those to support multisectoral action, which are part of any comprehensive tobacco control programme.

Some interventions for management of noncommunicable diseases that are cost-effective in high-income settings, which assume a cost-effective infrastructure for diagnosis and referral and an adequate volume of cases, are not listed under objective 4, e.g. pacemaker implants for atrioventricular heart block, defibrillators in emergency vehicles, coronary revascularization procedures, and carotid endarterectomy.

3 Very cost-effective i.e. generate an extra year of healthy life for a cost that falls below the average annual income or gross domestic product per person.
### Menu of policy options

<table>
<thead>
<tr>
<th>Harmful use of alcohol</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Implement the WHO global strategy to reduce harmful use of alcohol (see objective 3, paragraphs 42, 43) through actions in the recommended target areas including:</td>
</tr>
<tr>
<td>- Strengthening awareness of alcohol-attributable burden; leadership and political commitment to reduce the harmful use of alcohol</td>
</tr>
<tr>
<td>- Providing prevention and treatment interventions for those at risk of or affected by alcohol use disorders and associated conditions</td>
</tr>
<tr>
<td>- Supporting communities in adopting effective approaches and interventions to prevent and reduce the harmful use of alcohol</td>
</tr>
<tr>
<td>- Implementing effective drink-driving policies and countermeasures</td>
</tr>
<tr>
<td>- <strong>Regulating commercial and public availability of alcohol</strong>¹</td>
</tr>
<tr>
<td>- <strong>Restricting or banning alcohol advertising and promotions</strong>¹</td>
</tr>
<tr>
<td>- <strong>Using pricing policies such as excise tax increases on alcoholic beverages</strong>¹</td>
</tr>
<tr>
<td>- Reducing the negative consequences of drinking and alcohol intoxication, including by regulating the drinking context and providing consumer information</td>
</tr>
<tr>
<td>- Reducing the public health impact of illicit alcohol and informally produced alcohol by implementing efficient control and enforcement systems</td>
</tr>
<tr>
<td>- Developing sustainable national monitoring and surveillance systems using indicators, definitions and data collection procedures compatible with WHO’s global and regional information systems on alcohol and health</td>
</tr>
</tbody>
</table>

### Unhealthy diet and physical inactivity

| Implement the WHO Global Strategy on Diet, Physical Activity and Health (see objective 3, paragraphs 40–41) |
| Increase consumption of fruit and vegetables |
| To provide more convenient, safe and health-oriented environments for physical activity |
| Implement recommendations on the marketing of foods and non-alcoholic beverages to children (see objective 3, paragraph 38–39) |
| Implement the WHO global strategy for infant and young child feeding |

### Voluntary global targets

<table>
<thead>
<tr>
<th>WHO tools</th>
</tr>
</thead>
<tbody>
<tr>
<td>At least a 10% relative reduction in the harmful use of alcohol, as appropriate, within the national context</td>
</tr>
<tr>
<td>A 25% relative reduction in the prevalence of raised blood pressure or contain the prevalence of raised blood pressure according to national circumstances</td>
</tr>
<tr>
<td>A 25% relative reduction in overall mortality from cardiovascular diseases, cancer, diabetes or chronic respiratory diseases</td>
</tr>
<tr>
<td>A 10% relative reduction in prevalence of insufficient physical activity</td>
</tr>
<tr>
<td>A 25% relative reduction in the prevalence of raised blood pressure according to national</td>
</tr>
</tbody>
</table>

¹ Very cost-effective i.e. generate an extra year of healthy life for a cost that falls below the average annual income or gross domestic product per person.
## Menu of policy options

- Reduce salt intake
- Replace trans fats with unsaturated fats
- Implement public awareness programmes on diet and physical activity
- Replace saturated fat with unsaturated fat
- Manage food taxes and subsidies to promote healthy diet
- Implement other policy options listed in objective 3 for addressing unhealthy diet and physical inactivity

## Voluntary global targets

- Halt the rise in diabetes and obesity
- A 25% relative reduction in overall mortality from cardiovascular diseases, cancer, diabetes or chronic respiratory diseases
- A 30% relative reduction in mean population intake of salt/sodium intake

## WHO tools

- An 80% availability of the affordable basic technologies and essential medicines, including generics, required to treat major noncommunicable diseases in both public and private facilities
- A 25% relative reduction in overall mortality from cardiovascular diseases, cancer, diabetes or chronic respiratory diseases

---

### Objective 4

- Integrate very cost-effective noncommunicable disease interventions into the basic primary health care package with referral systems to all levels of care to advance the universal health coverage agenda
- Explore viable health financing mechanisms and innovative economic tools supported by evidence
- Scale up early detection and coverage, prioritizing very cost-effective high-impact interventions including cost-effective interventions to address behavioural risk factors
- Train health workforce and strengthen capacity of health system particularly at primary care level to address the prevention and control of noncommunicable diseases
- Improve availability of affordable basic technologies and essential medicines, including generics, required to treat major noncommunicable diseases, in both public and private facilities
- Implement other cost-effective interventions and policy options in objective 4 (see paragraph 48) to strengthen and orient health systems to address noncommunicable diseases and risk factors through people-centred primary health care and universal health coverage
- Develop and implement a palliative care policy using cost-effective treatment modalities, including opioids analgesics for pain relief and training health workers

---

1. Very cost-effective i.e. generate an extra year of healthy life for a cost that falls below the average annual income or gross domestic product per person.

2. And adjust the iodine content of iodized salt, when relevant.

1 Policy actions for prevention of major noncommunicable diseases are listed under objective 3.
2 Very cost-effective i.e. generate an extra year of healthy life for a cost that falls below the average annual income or gross domestic product per person.
3 Screening is meaningful only if associated with capacity for diagnosis, referral and treatment.
Menu of policy options | Voluntary global targets | WHO tools
--- | --- | ---
- Strengthen human resources and institutional capacity for research  
- Strengthen research capacity through cooperation with foreign and domestic research institutes  
- Implement other policy options in objective 5 (see paragraph 53) to promote and support national capacity for high-quality research, development and innovation | Contribute to all 9 voluntary global targets | - World Health Report 2013  
- Global strategy and plan of action on public health, innovation and intellectual property (WHA61.21)  
- Existing regional and national tools  
- Other relevant tools on WHO web site including resolutions and documents of WHO governing bodies and regional committees

Objective 6
- Develop national targets and indicators based on global monitoring framework and linked with a multisectoral policy and plan  
- Strengthen human resources and institutional capacity for surveillance and monitoring and evaluation  
- Establish and/or strengthen a comprehensive noncommunicable disease surveillance system, including reliable registration of deaths by cause, cancer registration, periodic data collection on risk factors, and monitoring national response  
- Integrate noncommunicable disease surveillance and monitoring into national health information systems  
- Implement other policy options in objective 6 (see paragraph 59) to monitor trends and determinants of noncommunicable diseases and evaluate progress in their prevention and control | - Global monitoring framework  
- Verbal autopsy instrument  
- STEPwise approach to surveillance  
- Global Tobacco Surveillance System  
- Global Information System on Alcohol and Health  
- Global school-based student health survey, ICD-10 training tool  
- Service Availability and Readiness (SARA) assessment tool  
- IARC GLOBOCAN 2008  
- Existing regional and national tools  
- Other relevant tools on WHO web site including resolutions and documents of WHO governing bodies and regional committees

The regional action plan for noncommunicable diseases (NCDs), developed in 2008, will complete its implementation period in 2013. Major outcomes of the plan under the six objectives were:

Objective 1: To raise the priority accorded to NCDs in development work at the global and national levels, and to integrate prevention and control of such diseases into policies across all government departments.

Priority for NCDs has been raised at the global level through the Political Declaration of the General Assembly High-Level Meeting in September 2011. Regional commitments, particularly the Seoul Declaration and the Honiara Communiqué on the Pacific Noncommunicable Disease Crisis, reflected the collective will to expand and intensify efforts for NCD prevention and control in the Region. The WHO Regional Committee for the Western Pacific discussed NCD prevention and control in its sixty-second session and endorsed a resolution to scale up NCD prevention and control in the Region. The sixty-third WHO Regional Committee for the Western Pacific has reviewed progress in NCD prevention and control.

Objective 2: To establish and strengthen national policies and plans for the prevention and control of NCDs.

NCD prevention and control has progressed well during this period with 20 countries in the Region having a unit with dedicated budget for NCDs. National multisectoral plans have been developed in five countries.

Objective 3: To promote interventions to reduce the main shared modifiable risk factors for NCDs: tobacco use, unhealthy diets, physical inactivity and harmful use of alcohol.

There have been innovative actions in tobacco control in the Region, such as Australia’s plain packaging law. Population-based reduction of NCD risk factors has been promoted, and 10 countries have initiated/strengthened salt reduction programmes. Promotion of physical activity was supported in eight countries, with some developing national physical activity guidelines. Marketing of foods and non-alcoholic beverages to children is being addressed in four countries. Some progress on excessive consumption of alcohol has been made through injury prevention and broader NCD programmes. Health system strengthening through primary health care is one of the areas supported, and 14 countries have partially adapted the WHO Package of essential noncommunicable (PEN) disease interventions for primary health care in low-resource settings.

Objective 4: To promote research for the prevention and control of NCDs

Operational research was carried out to study the pattern and density of advertising of foods and non-alcoholic beverages to children. Research was conducted on equity and NCDs in the Philippines. Research on tobacco advertising and sponsorship was carried out in Cambodia, the Lao People’s Democratic Republic and Viet Nam. Research on tobacco point-of-sale advertising was completed in Guam.

Objective 5: To promote partnerships for the prevention and control of NCDs

Since 2000, the Western Pacific Declaration on Diabetes has been an ongoing collaboration of the International Diabetes Federation, the WHO Regional Office for the Western Pacific and the Secretariat for the Pacific Community. A joint programme of the International Atomic Energy
Appendix 2

Agency (IAEA) and WHO provided supported to Cambodia, Malaysia, Mongolia, the Philippines and Viet Nam.

Objective 6: To monitor NCDs and their determinants and evaluate progress at the national, regional and global levels.

Surveillance of risk factors was supported, and 25 countries have completed or are conducting STEPwise approaches to surveillance (STEPS). Thirteen countries have carried out the Global School-based Student Health Survey (GSHS). Cancer registries are operational in 20 countries. Tobacco surveillance through the Global Adult Tobacco Survey (GATS) and Global Youth Tobacco Survey (GYTS) were also carried out.

WHO conducts regular surveys to assess country capacity for the prevention and control of NCDs. Table 1 presents the progress in NCD country capacity in the Region in 2004, 2010 and 2013. There is demonstrable progress in all domains. WHO will continue this global survey periodically to report the progress and will help to monitor the implementation of the action plan.

INTRODUCTION

1. Resolution WHA66.10 endorsed the WHO Global NCD Action Plan for the Prevention and Control of Noncommunicable Diseases 2013–2020 (WHO Global NCD Action Plan 2013-2020). The plan aims to operationalize the commitments from Heads of State and Government included in the Political Declaration of the High-level Meeting of the United Nations General Assembly on the Prevention and Control of Noncommunicable Diseases (UN Political Declaration on NCDs). The WHO Global NCD Action Plan 2013-2020 comprises a set of actions which, when performed collectively by (i) Member States, (ii) international partners and the private sector, and (iii) the WHO Secretariat, will support governments in their national efforts to contribute to the attainment of 9 voluntary global targets for noncommunicable diseases by 2025. The building and coordinating of results-oriented engagement or collaborative efforts, as appropriate, including with non-health and non-State actors\(^1\), at the national, regional and global levels for the prevention and control of noncommunicable diseases are essential components of the WHO Global NCD Action Plan 2013-2020.

2. Operative paragraph 3.2 of resolution WHA66.10, requested the Director-General to develop draft terms of reference for a global coordination mechanism, as outlined in paragraphs 14–15 of the WHO Global NCD Action Plan 2013–2020, aimed at facilitating engagement among Member States, United Nations funds, programmes and agencies, and other international partners and non-State actors, while safeguarding WHO and public health from undue influence by any form of real, perceived or potential conflicts of interest.

3. Operative paragraph 3.3. of resolution WHA66.10 requested the Director-General to develop the draft Terms of Reference for a global coordination mechanism through a formal Member States\(^2\) meeting in November 2013, preceded by consultations with: (i) Member States, including through regional committees; (ii) United Nations agencies, funds and programmes and other relevant intergovernmental organizations; and (iii) nongovernmental organizations and private sector entities, as appropriate, and other relevant stakeholders; and

\(^1\) Non-State actors include academia and relevant nongovernmental organizations, as well as selected private sector entities, as appropriate, excluding the tobacco industry, and including those that are demonstrably committed to promoting public health and are willing to participate in public reporting and accountability frameworks.

\(^2\) And, where applicable, regional economic integration organizations.
to be submitted, through the Executive Board, to the Sixty-seventh World Health Assembly for approval.

4. Paragraph 15 of the WHO Global NCD Action Plan 2013-2020 states that a global coordination mechanism is to be developed based on the following parameters:
- The mechanism shall be convened, hosted and led by WHO and report to the WHO governing bodies.
- The primary role and responsibility for preventing and controlling noncommunicable diseases lie with governments, while efforts and engagement of all sectors of society, international collaboration and cooperation are essential for success.
- The global mechanism will facilitate engagement among Member States, United Nations funds, programmes and agencies, and other international partners, and non-State actors, while safeguarding WHO and public health from any form of real, perceived or potential conflicts of interest.
- The engagement with non-State actors will follow the relevant rules currently being negotiated as part of WHO reform and to be considered, through the Executive Board, by the Sixty-seventh World Health Assembly.

5. This WHO Discussion Paper outlines a draft terms of reference for a global coordination mechanism for the prevention and control of noncommunicable diseases.

6. As agreed by consensus among Member States in May 2013, the following two reports are being made available to support the discussions around the development of a global coordination mechanism for the prevention and control of noncommunicable diseases: (i) Document A65/7 “Options and a timeline for strengthening and facilitating multisectoral action for the prevention and control of NCDs through partnership”; and (ii) Document A/67/373 “Note by the Secretary-General transmitting the report of the Director-General of the World Health Organization on options for strengthening and facilitating multisectoral action for the prevention and control of noncommunicable diseases through effective partnership”.

---

3 And, where applicable, regional economic integration organizations.
4 Without prejudice to ongoing discussions on WHO engagement with non-State actors, international partners are defined for this purpose as public health agencies with an international mandate, international development agencies, intergovernmental organizations including other United Nations organizations and global health initiatives, international financial institutions including the World Bank, foundations, and nongovernmental organizations.
5 Non-State actors include academia and relevant nongovernmental organizations, as well as selected private sector entities, as appropriate, excluding the tobacco industry, and including those that are demonstrably committed to promoting public health and are willing to participate in public reporting and accountability frameworks.
6 Available at apps.who.int/gb/ebwha/pdf_files/WHA65/A65_7-en.pdf
7 Available at www.who.int/nmh/events/2012/20121128.pdf
DRAFT TERMS OF REFERENCE

7. It is proposed that the final Terms of Reference outline the purpose and principles of a global coordination mechanism for the prevention and control of noncommunicable diseases (global coordination mechanism), as well as its functions, participants, responsibilities of participants, periodicity of general meetings, working groups, secretariat, administrative arrangements and accountability.

Purpose

8. The proposed purpose of a global coordination mechanism is described in Paragraph 15 of the WHO Global NCD Action Plan 2013–2020, as follows:

“The purpose of the proposed global coordination mechanism is to improve coordination of activities which address functional gaps that are barriers to the prevention and control of noncommunicable diseases.”

Overarching principles and approaches

9. It is suggested that a global coordination mechanism would rely on the following overarching principles and approaches and these are taken from parameters set out in paragraph 15 of the WHO Global NCD Action Plan 2013–2020:

– The mechanism shall be convened, hosted and led by WHO and report to the WHO governing bodies.

– The primary role and responsibility for preventing and controlling noncommunicable diseases lie with governments, while efforts and engagement of all sectors of society, international collaboration and cooperation are essential for success.

– The global mechanism will facilitate engagement among Member States\(^8\), United Nations funds, programmes and agencies, and other international partners,\(^9\) and non-State actors,\(^10\) while safeguarding WHO and public health from any form of real, perceived or potential conflicts of interest.

---

\(^8\) And, where applicable, regional economic integration organizations.

\(^9\) Without prejudice to ongoing discussions on WHO engagement with non-State actors, international partners are defined for this purpose as public health agencies with an international mandate, international development agencies, intergovernmental organizations including other United Nations organizations and global health initiatives, international financial institutions including the World Bank, foundations, and nongovernmental organizations.

\(^10\) Non-State actors include academia and relevant nongovernmental organizations, as well as selected private sector entities, as appropriate, excluding the tobacco industry, and including those that are demonstrably committed to promoting public health and are willing to participate in public reporting and accountability frameworks.
Annex 2

- The engagement with non-State Actors will follow the relevant rules currently being negotiated as part of WHO reform and to be considered, through the Executive Board, by the Sixty-seventh World Health Assembly.

**Question 1: Which of the above proposed principles do Member States and international partners agree with? Are there other principles that should be included?**

**Functional gaps that are barriers to the prevention and control of noncommunicable diseases**

10. A set of functional gaps that are barriers to the prevention and control of noncommunicable diseases for a global coordination mechanism to focus on have been identified by the Secretariat through the WHO Global NCD Action Plan 2013–2020, as well as: (i) “Assessing national capacity for the prevention and control of noncommunicable diseases: report of the 2010 global survey”;11 (ii) preliminary results of the same survey conducted during 2012; (iii) Document A65/7, “Options and a timeline for strengthening and facilitating multisectoral action for the prevention and control of noncommunicable diseases through partnership”;12 and (iv) Document A/67/373, “Note by the Secretary-General transmitting the report of the Director-General of the World Health Organization on options for strengthening and facilitating multisectoral action for the prevention and control of noncommunicable diseases through effective partnership.”13

11. The following have been identified as gaps:
   - Capacity building to accelerate the implementation of the set of actions included in the WHO Global NCD Action Plan 2013-2020.
   - Product access and access to services.
   - Product and service development and innovation.
   - Innovative financing mechanisms.
   - Establishing and strengthening, as appropriate, national surveillance and monitoring systems to enable reporting including against the 25 indicators of the comprehensive global comprehensive monitoring framework, the nine voluntary global targets, and any additional regional and national targets and indicators for noncommunicable diseases.

**Functions of a global coordination mechanism**

12. The proposed functions of a global coordination mechanism for the prevention and control of noncommunicable diseases are to facilitate coordination, collaboration and cooperation among the Participants, as follows:

---

12 Available at apps.who.int/jbi/sbwhc/pdf_files/WHA55/A65-7-en.pdf
13 Available at www.who.int/nmh/events/2012/20121126.pdf
- **Capacity building to accelerate the implementation of the set of actions included in the WHO Global NCD Action Plan 2013-2020:** To support national authorities in implementing evidence-based multisectoral action to address functional gaps in the response to noncommunicable diseases (e.g. in the areas of advocacy, strengthening of health workforce and institutional capacity, capacity building, product development, access and innovation), in implementing existing international conventions in the areas of environment and labour and in strengthening health financing for universal health coverage.

- **Product access and access to services:** Update knowledge and share experience among Participants on policy options to improve equitable access to prevention programmes at national level (such as those providing health information) and services, essential medicines and technologies for the prevention and control of noncommunicable diseases, with emphasis on medicines and technologies required for delivery of essential interventions for cardiovascular disease, cancer, chronic respiratory disease and diabetes, through a primary health care approach.

- **Product and service development and innovation:** To understand expectations, roles and contributions of Participants in supporting and facilitating research related to the prevention and control of noncommunicable diseases at global, regional and national levels, and its translation into practice, so as to enhance the knowledge base for national, regional and global action for the prevention and control of noncommunicable diseases.

- **Innovative financing and resource mobilization:** To exchange information on matters of common concern among the Participants concerning the provision of adequate, predictable and sustained resources at global, regional and national level for the prevention and control of noncommunicable diseases, through an increase in domestic budgetary allocations, voluntary innovative financing mechanisms and other means, including multilateral financing, bilateral sources and private sector and/or nongovernmental sources.

- **Establishing and strengthening national surveillance and reporting systems:** A global coordination mechanism could play an important role in establishing and strengthening, as appropriate, national surveillance and monitoring systems to enable reporting including against the 25 indicators of the comprehensive global monitoring framework, the nine voluntary global targets, and any additional regional or national targets and indicators for noncommunicable diseases.

- **Stocktaking:** To take stock of global, regional and national responses to address noncommunicable diseases, with a view to provide a global register of activities included in the WHO Global NCD Action Plan 2013-2020 which are carried out by the Participants.

- **Advocacy and awareness:** To encourage the active involvement of a broader base of stakeholders in support of implementing the set of actions included in the WHO Global NCD Action Plan 2013-2020, at global, regional and national level, while safeguarding public health from undue influence by any form of real, perceived or potential conflict of interest.
Annex 2

**Question 2:** Which of the above proposed functions do Member States and international partners agree with? Are there other functions that should be included?

**Participants**

13. The Participants of a global coordination mechanism would be as follows:14
   - Member States, and where applicable, regional economic integration organizations.
   - International partners, defined for this purpose as: public health agencies with an international mandate; international development agencies; intergovernmental organizations including other United Nations organizations and global health initiatives; international financial institutions including the World Bank, foundations, and nongovernmental organizations; UN organizations; intergovernmental organizations; and international financial institutions.
   - Non-State actors including academia and relevant nongovernmental organizations, as well as selected private sector entities, as appropriate, excluding the tobacco industry.

**Responsibilities of the Participants**

14. The responsibilities of the Participants are to:
   - Support national efforts for prevention and control of noncommunicable diseases, inter alia, through exchange of information on best practices and dissemination of research findings.
   - Be guided by WHO normative guidance and technical tools to support the implementation of the WHO Global NCD Action Plan 2013-2020.

**Periodicity of general meetings**

15. It is envisaged that the global mechanism would meet twice per year. It is proposed that the general meetings would be co-chaired by WHO and a representative from a Member State. Efforts should be made to rotate meetings between Geneva and other WHO regions, in order to increase the visibility of the WHO Global NCD Action Plan 2013-2020 across the world. Additional regional and ad hoc meetings could also be held as necessary.

16. The meetings would enable the Participants to:
   - Exchange information on progress, problems and challenges in relation to the prevention and control of noncommunicable diseases in general and collaborative projects.
   - To identify and plan for new events, initiatives and activities, including establishing ad hoc working groups.

---

Working groups

17. Working Groups could provide a way for group of participants with similar interests to exchange information and collaborate under the umbrella of the global mechanism on activities or projects in line with the WHO Global NCD Action Plan 2013-2020.

18. Creation of working groups could be proposed by any participants. Working groups should have terms of reference, clear objectives, work plan, planned publications, and an end-date.

19. A global coordination mechanism would assign between four to six working groups to take forward critical areas of work as appropriate that are in line with the WHO Global NCD Action Plan 2013-2020. Working groups would be expected to report on progress at regular intervals. The activities of the working groups would need to be financed by the working group participants themselves.

**Question 3:** Are there a set of initial working groups that Member States and international partners would like to see established?

Secretariat for a global coordination mechanism

20. WHO shall provide the Secretariat for a global coordination mechanism, which will be part of WHO’s Noncommunicable Diseases and Mental Health Cluster.

21. The main responsibilities of the Secretariat could be:
   - Acting as a point of enquiries and information regarding activities being undertaken by participants working on the WHO Global NCD Action Plan 2013-2020.
   - Organizing general and working group meetings, including preparation and distribution of documentation for meetings.

**Question 4:** Are there additional responsibilities that Member States and international partners would like to see the Secretariat undertaking?
Annex 2

Administrative arrangements

22. Participants should, in principle, be responsible for meeting their own expenses in relation to activities under a global coordination mechanism (including, but not limited to, travel and subsistence for attending meetings and participating in working groups).

23. The WHO Programme Budget 2014-2015 will include budgetary provisions to finance the work of the Secretariat for a global coordination mechanism.

24. Activities of the Secretariat for a global coordination mechanism would need to be financed by voluntary contributions from the Participants, in accordance with standing WHO practices.

25. Financial support from the commercial sector, including donations (in cash or in kind), should be consistent with standing WHO practices.

Accountability

26. Resolution WHA66.10 requests the Director-General to submit reports on progress made in implementing the WHO Global NCD Action Plan 2013-2020, through the Executive Board, to the Health Assembly in 2016, 2018 and 2021, and reports on progress achieved in attaining the nine voluntary global targets in 2016, 2021 and 2026.

27. Reports on the progress achieved in implementing a global coordination mechanism for NCDs, will be included in reports on progress made in implementing the WHO Global NCD Action Plan 2013-2020 in 2016, 2018 and 2021.

28. For transparency and accountability purposes, it is proposed that State and non-State Participants should report their work and results in implementing the actions included in the WHO Global NCD Action Plan 2013-2020 to the global coordination mechanism.

Question 5: Do Member States and international partners agree with proposed approach with regards the accountability for a global mechanism? How would participants be accountable to a global coordination mechanism for reporting on their activities? How could a global coordination mechanism create synergies with the Secretariat’s reports on progress achieved in attaining the nine voluntary global targets in 2016, 2021 and 2026?
Conflict of interest

29. With a view to strengthening its contribution to NCD prevention and control, paragraph 44 of the UN Political Declaration on NCDs\textsuperscript{15} call upon the private sector, where appropriate, to:
   - Take measures to implement the WHO set of recommendations to reduce the impact of the marketing of unhealthy foods and nonalcoholic beverages to children, while taking into account existing national legislation and policies.
   - Consider producing and promoting more food products consistent with a healthy diet, including by reformulating products to provide healthier options that are affordable and accessible and that follow relevant nutrition facts and labeling standards, including information on sugars, salt and fats and, where appropriate, trans-fat content.
   - Promote and create an enabling environment for healthy behaviours among workers, including by establishing tobacco-free workplaces and safe and healthy working environments through occupational safety and health measures, including, where appropriate, through good corporate practices, workplace wellness programmes and health insurance plans;
   - Work towards reducing the use of salt in the food industry in order to lower sodium consumption.
   - Contribute to efforts to improve access to and affordability of medicines and technologies in the prevention and control of NCDs.

30. Resolution WHA57.17 (Global strategy on diet, physical activity and health)\textsuperscript{16} requests the Director-General to cooperate with civil society and with public and private stakeholders committed to reducing the risks of NCDs in implementing the Global strategy on diet, physical activity and health and promoting healthy diet and physical activity, while ensuring avoidance of potential conflicts of interest. The Strategy underlines that WHO will hold discussions with the transnational food industry and other parts of the private sector in support of the aims of the Strategy.

31. Resolution WHA 63.13 (Global strategy to reduce the harmful use of alcohol)\textsuperscript{17} highlighted that the WHO Secretariat will provide support to Member States by, inter alia, continuing its dialogue with the private sector on how they best can contribute to the reduction of alcohol-related harm. Appropriate consideration will be given to the commercial interests involved and their possible conflict with public health objectives.

32. As acknowledged in the Secretariat’s report on external governance related to WHO’s engagement with non-State actors (document EB 133/16)\textsuperscript{18}, the fundamental challenge for WHO is as to how it can work with the wide range of non-State actors that currently have a significant role in global health in ways that benefit population health, advance the Organization’s objectives, contribute to better health governance, and, at the same time, use

\textsuperscript{18} http://apps.who.int/gb/ebwha/pdf_files/EB133/8133_16-en.pdf
Annex 2

engagement with non-State actors as a tool to pursue the strategic objectives set by the
governing bodies and protect the Organization’s decision-making, policy processes, and
normative work from any vested interest.

33. Document EB133/16 sets out the elements towards a framework for engagement with
non-State actors, including (i) a set of overarching principles applicable to any form of
engagement with any kind of non-State actor; (ii) a typology of interactions; (iii) rules of
engagement (policies and procedures) that relate to each type of engagement; (iv) specific
tools to increase overall transparency and specifically to manage conflicts of interest; and (iv)
systems for compliance, reporting and that enable senior management and WHO governing
bodies to systematically oversee all elements of engagement with non-State actors.

**Question 6:** What are the main approaches that public health interests can be safeguarded
from undue influence by any form of real, perceived or potential conflict of interest in a global
coordination mechanism?

**Name for a global coordination mechanism**

**Question 7:** What do Member States and international partners consider would be a suitable
name for a global coordination mechanism?

*Links with the UN Interagency Taskforce on the Prevention and Control of NCDs*

34. In accordance with a resolution adopted by ECOSOC on 22 July 2013, the United
Nations Interagency Task Force on the Prevention and Control of Noncommunicable Diseases
will coordinate the activities of the relevant United Nations funds, programmes and specialized
agencies and other intergovernmental organizations, to support the realization of the
commitments made by Heads of State and Government in the United Nations Political
Declaration on Noncommunicable Diseases, in particular through the implementation of the

35. Similarly, the ECOSOC resolution requests the United Nations Secretary-General, in close
collaboration with the Director-General of WHO, and in full consultation with Member States
through WHO, to develop the terms of reference for the United Nations Interagency Task Force
on the Prevention and Control of Noncommunicable Diseases, incorporating, but not limited to,
the work of the United Nations Ad Hoc Interagency Task Force on Tobacco Control and the
current work of the WHO Secretariat to develop a division of tasks and responsibilities, as
exemplified by appendix 4 to the WHO Global NCD Action Plan 2013-2020, and also requests

---

the United Nations Secretary-General to include the terms of reference in his report on the implementation of the present resolution for the consideration of the Economic and Social Council at its substantive session of 2014. Accordingly, WHO will convene a formal meeting with Member States on 13 November 2013 to complete work on developing a terms of reference for the United Nations Interagency Task Force.

36. Taking into account that this Task Force will be convened and led by WHO, the Members of the Task Force would be participants in a global coordination mechanism, in line with paragraph 13.
