Update on the Dengue situation in the Western Pacific Region

Northern Hemisphere

Cambodia

As of 22 August 2017, a total of 1,838 suspected dengue cases were reported in 2017. The total number of reported dengue cases including dengue haemorrhagic fever and dengue shock syndrome was lower than the 3 year-threshold of the same period from 2014-2016 (Figure 1).

Lao PDR

As of 18 August, there were 6,730 cases of dengue with 10 deaths reported in Lao PDR in 2017, with 492 cases reported in epi week 33. Dengue activity is high with the number of reported cases this year exceeding the epidemic alert threshold (mean+2SD) (Figure 3).
Malaysia

In week 33, 2017 (from 13 July to 19 August 2017), 1,672 dengue cases were reported, a decrease of 12.0% compared to week 32 (Figure 4). As of week 33, the cumulative number of dengue cases in 2017 was 63,092 with 146 deaths compared to 71,590 cases with 162 deaths during the same period in 2016.
Philippines
A total of 58,598 dengue cases were reported nationwide from January 1 to August 5, 2017. This number is 43.8% lower (104,211) than that for the same period in 2016 (Figure 5).

Singapore
As of 19 August 2017, there were 1,845 dengue cases reported in Singapore since January 2017. This is lower than the number of reported cases during the same period since 2013. During week 33, there were 56 cases reported and the number of reported cases in 2017 remains lower than those reported for the same time period in the previous 5 years (Figure 6).

![Figure 6 Number of Dengue cases per week, 2012-2017, Communicable Diseases Division, Ministry of Health, Singapore](image)

Viet Nam
As of 13 August 2017, there were 90,626 cases of dengue reported in Viet Nam including 24 deaths. Compared to the same period in 2016, the cumulative number of cases increased by 67.8% and the number of deaths increased by seven. Although majority of cases reported remain from the South (52.8%), a sharp increase in the number of cases has been observed in the North (almost 25 times compared to the same period last year), especially from Ha Noi with approximately 17,365 cases.
Southern Hemisphere

Australia
As of 29 August, there were 723 laboratory-confirmed dengue cases reported in Australia in 2017. The number of cases reported is lower than that reported during the same period in the previous years (2012-2016) (Figure 8).

Department of Health, Australia
Pacific Islands Countries and Areas

French Polynesia
Between week 31 and 32, there were 22 confirmed cases reported. Among these, 17 cases (77%) were confirmed as DENV-1 infection and 11 cases (50%) were children under 15 years of age.

New Caledonia
As of Aug 28, 2017, 4,484 dengue cases were reported in 2017. There is downward trend in the number of reported cases since week 16 (Figure 10).
